

**DR. HESSE**

DR. HESSE GMBH & CIE KG

Special factory for electroplating – since 1890

## **Guiding principles and philosophy of DR. HESSE GMBH & CIE KG**

1. We are actively shaping the future. Our long-term strategy is designed to achieve sustainable success.
2. Our customers are at the heart of everything we do. Competent product development allows us to deliver highly efficient processes that add value for our customers.
3. We cultivate cooperative partnerships with our customers and suppliers, offer and demand the highest quality and fast service, and set great store by working together to achieve optimum added value for our customers.
4. Our employees enjoy an attractive and forward-looking working environment that offers individual development opportunities. Their dedication and competency form the key to shared success with our customers.
5. We will increase our market share globally. To this end, we are building solid relationships with new local partners, as we have been doing for decades with customers and suppliers in existing markets.
6. We continuously work on the application of innovative and eco-friendly materials to our processes, putting us always one step ahead of new requirements.
7. Our legally secure organization and concerted efforts as part of professional associations in the chemicals industry, an environment that is heavily influenced by changes to legislation, contribute to safeguarding the future of our industry.
8. These efforts serve to preserve jobs and fulfil our social responsibilities.
9. Dr. Hesse has been an independent family-run business for more than 120 years.  
We will stay that way.
